

KREBS & RIEDEL
Blue Moon

Vitrified bonded grinding wheel

KREBS & RIEDEL

Gear grinding

Blue Moon

For continuous generating, bevel grinding and profile grinding, KREBS & RIEDEL has developed the new grinding wheel line Blue Moon.

This improved design offers increased cost-effectiveness through extended dressing cycles and increased removal rates. Blue Moon was specially developed for working speeds up to 100 m/s (with fine grain center) and enables high process reliability through proven quality standards.

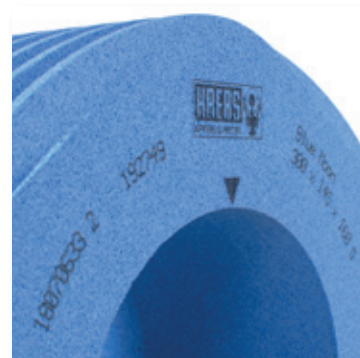

Blue Moon's newly designed grain combination optimizes the pore space and the special grain geometry improves cutting ability. This increases overall cutting performance for maximum efficiency.

Blue Moon gear grinding:

Blue Moon is always the highest quality and can be unprofiled or pre-profiled for module 1 - 12, according to our specifications. It's perfect for machine types by Gleason, Kapp, Liebherr, Mitsubishi, Reishauer, Samputensili and more.

Application:

- Continuous generating grinding
- Profile Grinding
- Bevel Gear Grinding

Advantages:

- Cool grinding
- Increased working speed
- Highest process safety
- Increased efficiency through extended dressing cycles
- Low wear of dressing tool
